User Manual RCM Publisher

 **RC-Timing**

9 Concluding remarks

We hope you enjoy RCM Publisher. If you have any questions or any problems please contact us. Simply write an email to support@rc-timing.ch. Please do not forget to include the program name and the version number you are using. This will help us to answer your questions without any delay. If you are not known to us as a contact person of one of our customers, we should also know the contract number.

1 Introduction

Welcome to RCM Publisher, the essential additional application for timekeeping. RCM Publisher is a monitor program and visualizes the actual ranking list produced by the RCM Ultimate. This allows to keep anybody informed about the racing on the track. RCM Publisher has a ticker function implemented for additional information.

RCM Publisher needs one of the following programs of the RCM product spectrum: RCM Ultimate, RCM Advanced or RCM Kart. The notes made in this user manual are based on RCM Ultimate but are valid analogous to the other timekeeping programs of RCM.

2 Installation of RCM Publisher

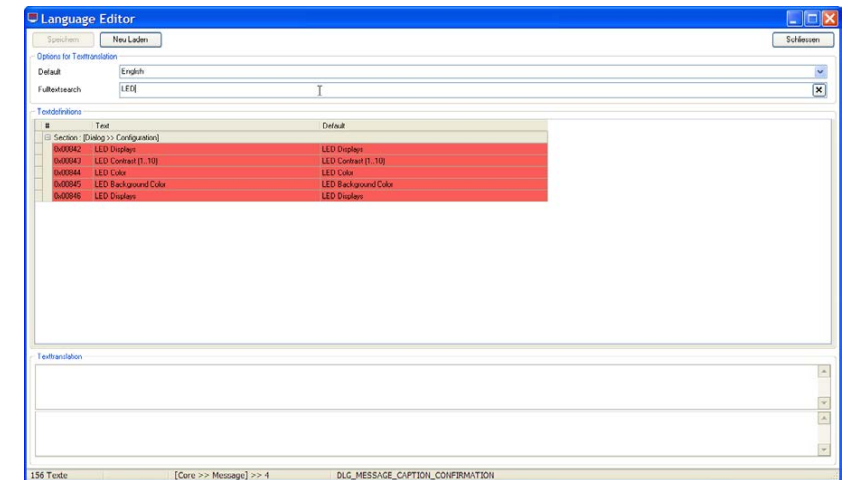

RCM Publisher is delivered as executable setup-file. To start the installation you have to run this setup file (double click in the Windows Explorer on the filename like "RCM.Publisher(v1.0.6.2-F)" or use start/run the main menu of Windows).

If a version of RCM Publisher is already installed on your computer, the setup will perform an update. Otherwise setup does a full installation. Before you install an update we recommend to backup the complete RCM Publisher folder. Please do not delete this folder or delete files in it.

Please note, that the update version is mostly newer than the full version. If you install RCM Publisher the first time you should run an update directly after the installation.

With Fulltextsearch you can search for a Text or parts of a text. Just enter the desired text in this field and a new windows appears, in which you can change the text definitions.

8 Help

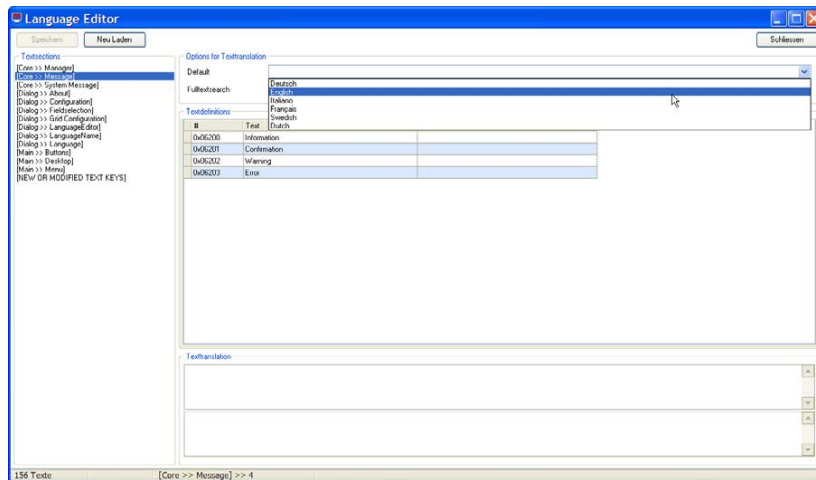

8.1 Release history

The release history is a text file with comments to all changes/devolepements have been made for this application.

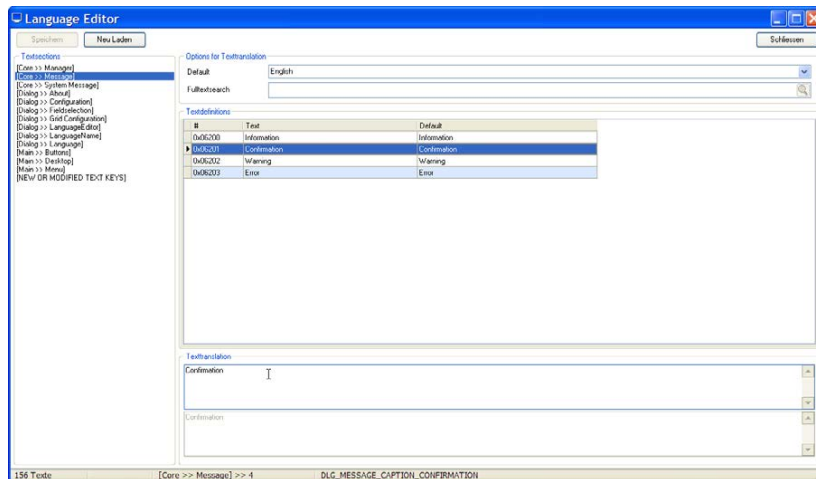

The single entries are marked with letters: [M] = modification, [B] = bug fixing and [F]= new function.

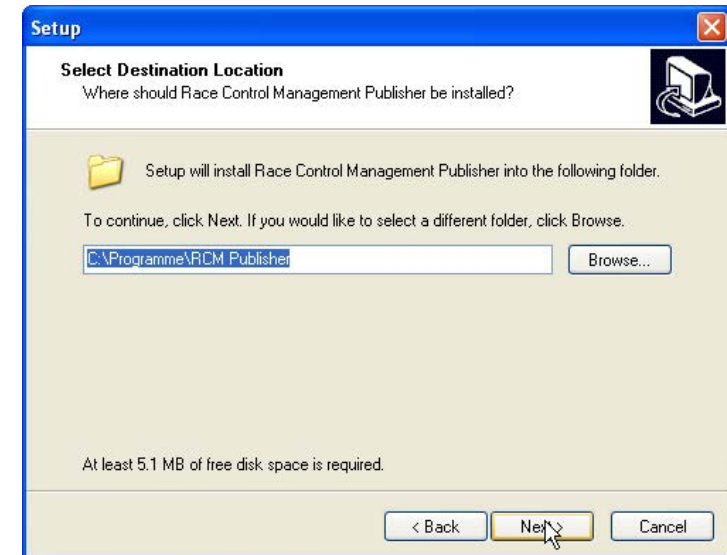

When you get a new version we recommend that you read the release history to be informed on the news of RCM Publisher.

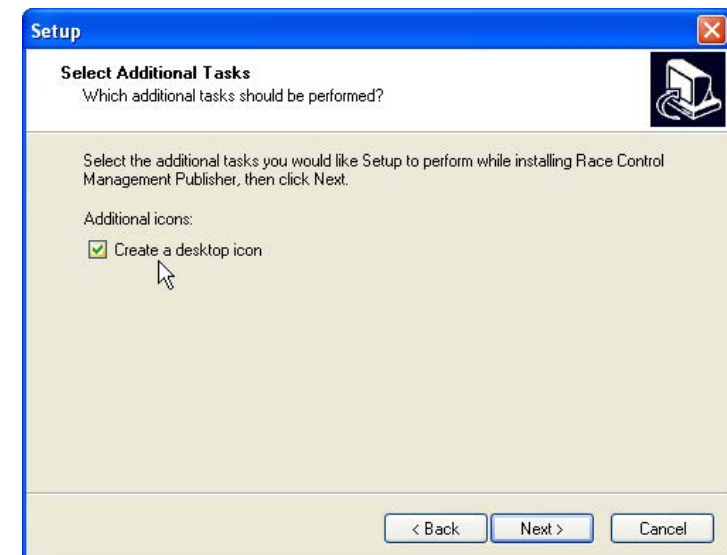

After having selected a topic in the left column you have to mark the text in the right column. You can change the text below in the field Texttranslation. Please note, that the changes will only be effective, when you finish by clicking the Save-button.

If you have created a new language file and want to translate it, make sure that RCM Publisher uses this language (Configuration/Language/RCM Language). Cause the new set is based on the English Set, all text is now in English. The next step is to translate all text with the language editor. For a better understanding of all text we recommend, that you use the default-setting of the language editor to have the text also displayed in that language you are familiar. Please note again, that you have to save (with the Save button) all your changes before you select another topic in the left column of the language editor.

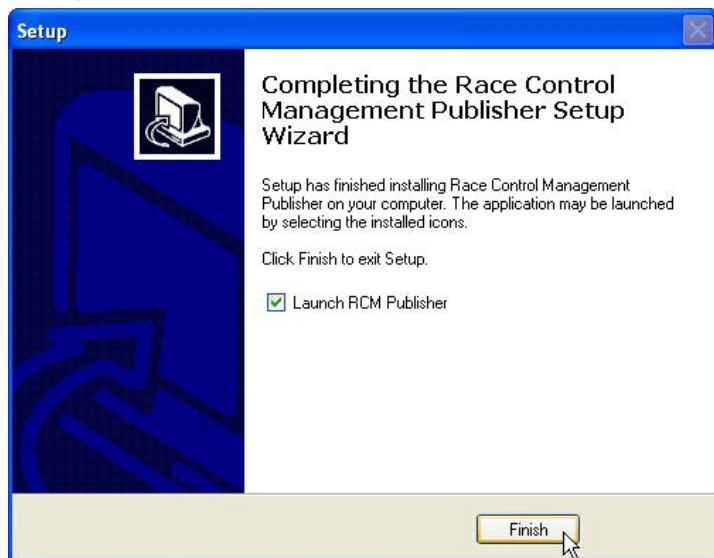

After the welcome screen (please click here on Next), the next windows shows you the destination folder. Preferable this is "C:\program files\RCM Publisher" or "C:\RC-Timing\RCM Publisher". You should never use the folder "program files" when using Windows Vista, Windows 7 or higher. Install the program in a different folder like C:\RC-Timing\RCM Publisher". Due to the handling of the user rights in these versions of Windows The program will not work correctly if it is installed in C:\program files".

Again you click on next and in the following window you can determine whether setup creates an icon on the desktop for starting RCM Publisher.

The next window shows you a summary of the actions setup will execute. With clicking on Install you will start the setup.

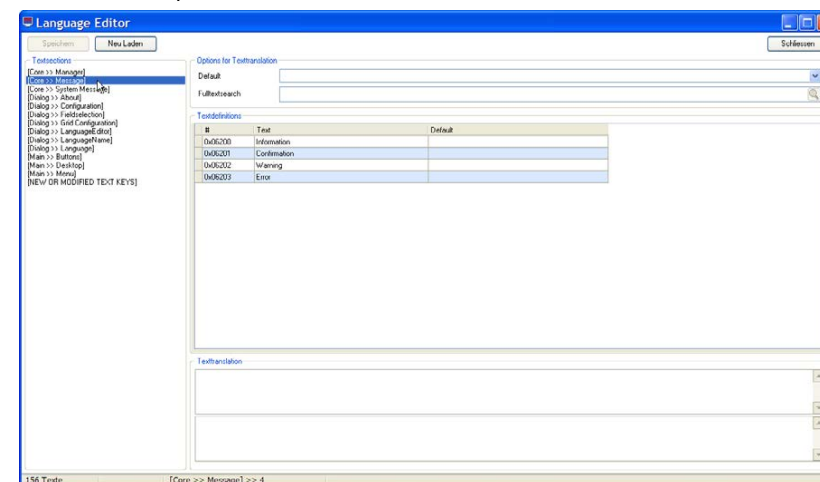

7.1.3 Language editor

The Language editor allows you to change all the text used by RCM Publisher. Furthermore it is possible to generate new language sets and to translate all the text into a desired language.

The windows of the language editor shows you in the left column a menu ordered to topics which are based on the use of windows and/or functions. If one of these topics are marked, you see in the right column a table of all the text definitions related to this topic.

On top of the right column you can define a default language. This will be active, when you mark another topic on the left side.

Left click on English and click on the notepad-field in the upper left corner. This opens a window in which you have to type in the new name of the Language you want to create. You have only to type in the name in the Language field.

The filename will be automatically created and should not be changed. For the name of the language please use the English description. When you confirm your input with Ok, a new set based on the English set will be created. Now you can translate all text with the language editor.

7.1.2 Delete a Language

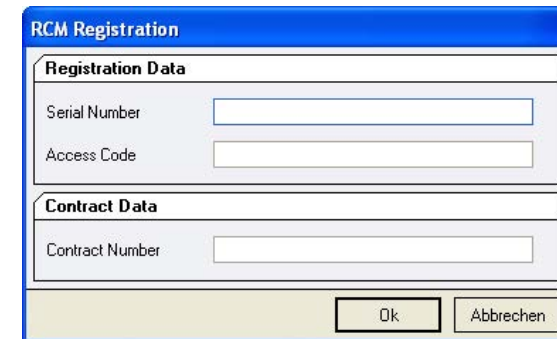

With Configuration/Language you can also delete a language, except German, English, Italian and French. Left click on the language and click on the square with the cross in the upper left corner.

You will be asked if you really want to delete the language. Confirming this with Ok, the language will be deleted. Please be careful using this function cause it takes a lot of time to make a translation.

2.1 Registration

To activate the program you need the contract number, the serial code and the access code. You have received these information with your order from RCM. Launching the application the first time you have to type in these information before you can use the program.

The application language is set to English by default. For changing this language please see Settings/Language later in the manual.

3 First Steps

3.1 Configuration of the network

The timekeeping software of RC-Timing (RCM Ultimate, RCM Professional, RCM Advanced, RCM Beginners and RCM Kart) is equipped with a Service-Discovery-Manager, which enables an automatic connection to the clients like RCM Publisher, RCM Voice and all the others.

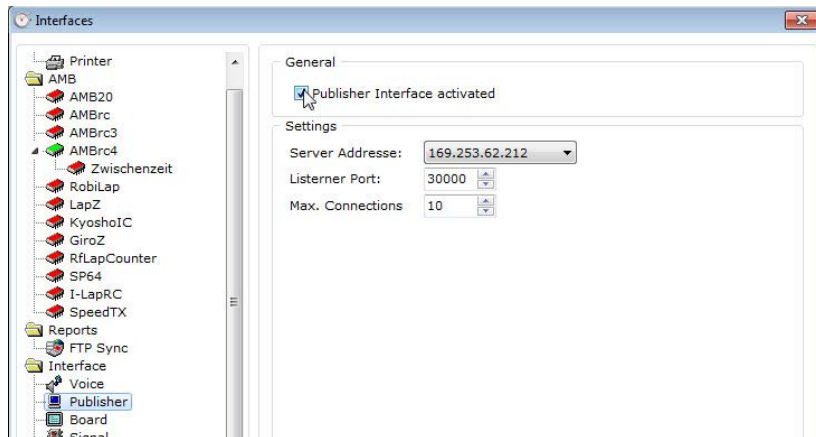

But first of all, the interface in the timekeeping software has to be enabled. Please run RCM Ultimate (or another application RCM Publisher is cooperating) and go to Settings/Interfaces. The checkbox "Publisher Interface activated" must be activated. If not, please do it and confirm this change with Save. Depending on the number of Publisher programs you have installed in your network, the number of connections must be set high enough.

Now you start RCM Publisher and the program find the connection automatically, shown by the hint in the footline „Connected to RCM Publisher Interface“. If this is not the case and in the footline "Connection Timeout!!!" is written, RCM Publisher is not connected to RCM Ultimate. In addition the bar just below the displayed clocks is colored red. You have to set the IP-address of the server manually.

Please run again RCM Ultimate (or another application RCM Publisher is cooperating) and go to Settings/Interfaces.

In the left column of the window you mark Publisher.

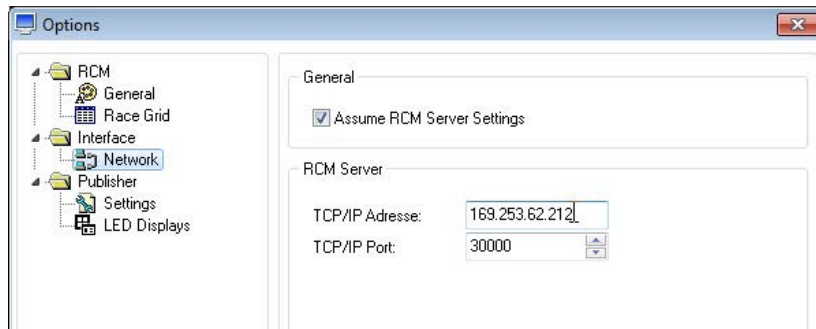

In the right column you now see the Server-IP-Address which must be set in RCM Publisher.

In RCM Publisher you choose Configuration/Options.

In this windows you mark on the left column Network and type the IP-Address you have found in RCM Ultimate into the field TCP/IP-Address.

Please leave the number of the TCP/IP Port at 30000. Only with this port RCM Publisher is able to receive the necessary information from RCM Ultimate. Confirm your settings by clicking Ok. Now the footer line changes to "Connected to RCM-Ultimate" and the color of the bar will change to white. Please consider, that it can take several seconds until RCM Publisher has found the connection to RCM Ultimate. In the footer line of RCM Ultimate you will find the information "Publisher: 1".

Show heat result after race has been finished for X seconds: If activated, the result is shown on the screen for a defined time. This time can be determined in seconds. If "Stop delay time with start of the countdown" is activated, the screen is switched to the new group when the countdown for the race is started.

6.2.5 Publisher/LED Displays

Here the contrast, Color and the backgroundcolor of the LED-Displays can be set.

7 Tools

7.1 Language Editor

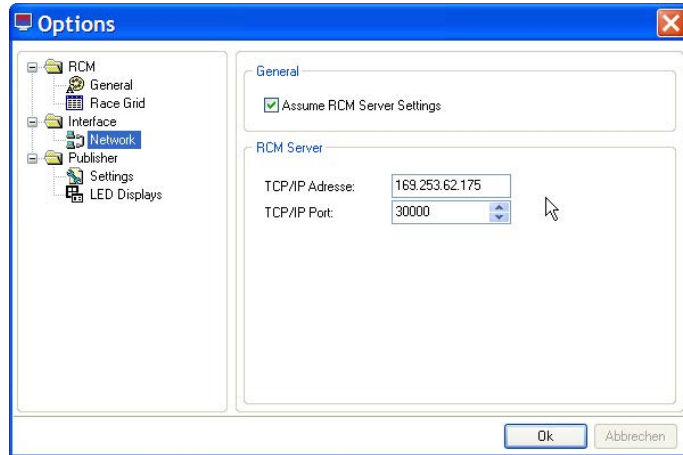

7.1.1 Create a new language

The language editor can be used to create a new language set. The name of the new language must be created in the menu Configuration/Language.

6.2.3 Network

In Network you have to configure the IP-Address of the computer where the timekeeping-software is running (as described in First Steps in this manual). RCM Publisher needs a network connection to this computer. You should activate the option "Assume RCM Ultimate Settings".

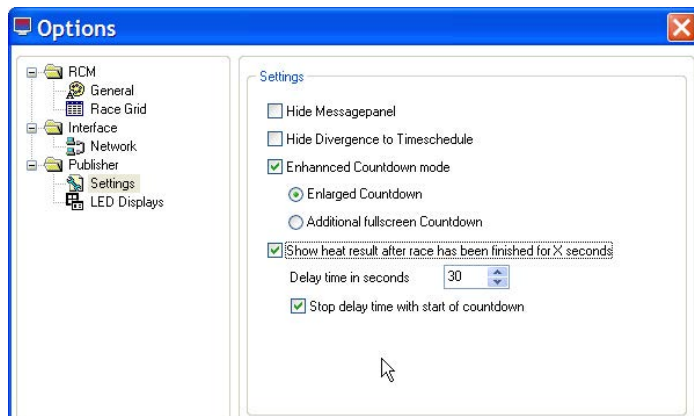

6.2.4 Publisher/Settings

Hide Messagepanel: You can hide the messagepanel below. This means, that the display window will be larger. This can be useful if the number of drivers in a heat is very high. More drivers can be displayed.

Hide divergence to timeschedule: When activated, the divergence to the timeschedule is not shown.

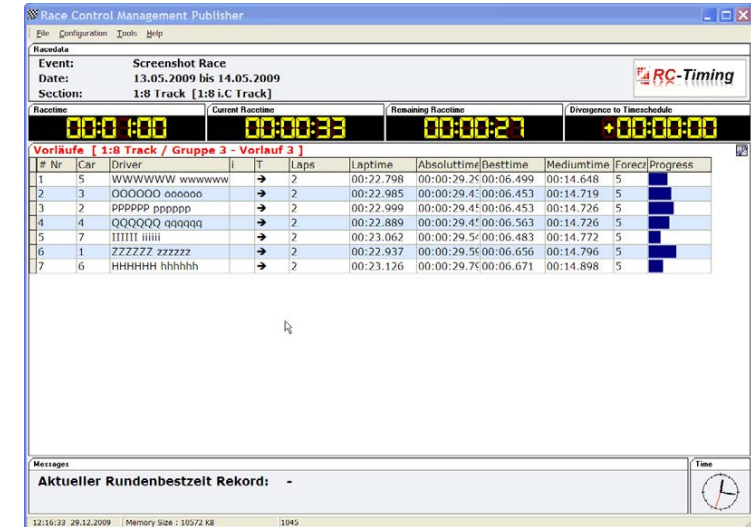

Enhanced Countdown mode: If activated, a big clock is shown with the countdown time or the countdown clock will be displayed larger, when a countdown is running on RCM Ultimate. This depends on the option you choose.

If RCM Publisher can not establish a connection your network may be does not work properly. To check this, please open a Command Shell and type in PING <ip-adresse> (for example PING 255.255.255.158). If you got an error message (time limit exceeded), your network is not working properly and you have first to check the connections.

4 The RCM Publisher Window

RCM Publisher shows only information based on a race. No administration work is visible, the ranking is automatically correctly according to the used rule.

The window of RCM Publisher is divided in several parts where you find all useful information about a race.

In the upper part the Event, the date and the section is displayed.

In the main (middle) part all data of the actual race is displayed and in the lower part you find messages send from the timekeeping program and a clock.

The information in the fields means in detail:

Nr: The place (from top to bottom place 1 to last place)

Car: The number of the car in the starting position

Driver: Name of the driver

i: This is a field for information only. It changes its colour to red if the transponder passed the loop and stays red until the locktime is gone.

Laps: Number of laps of the driver

Laptime: Time for the last lap of the driver

Absoluttime: Time since the start for the last transponder passing

Besttime: Best laptime for the driver in this heat

Mediumtime: Average laptime for the last laps of the driver

Forecast: Forecasted number of laps for the driver under respect of the driving until now.

Progress A bar is displayed. The length of the bar corresponds to the lap just raced by the driver.

Additional columns will be shown like in RCM Ultimate. Please refer to the handbook of RCM Ultimate for more information.

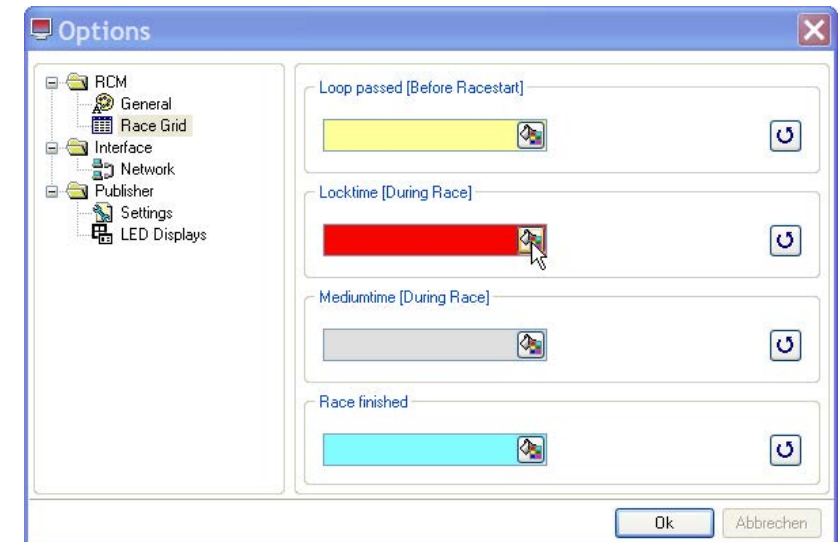

Besides of this fields you can display more. To select more fields left click on the button in the upper right corner.

6.2.2 RCM/Race Grid

The colours a driver will be marked in the time keeping can be set here.

Loop passed (default light yellow): When a driver passes the loop and the transponder number is registered to a driver, it will be marked in that colour. This makes it easy to check whether all drivers are on the track or not.

Locktime (default red): This marking is visible for the locktime. In between this time no additional laps are counted but in the lap time logfile these laps are visible and marked with "NOK". This means,, that these laps will not be counted for the result. Mediumtime (default grey): Drivers usually drive their laps continuously in the time frame. This time frame is the medium time plus or mines a certain time ratio. If this medium time plus the ration time is expired the driver line will be marked in light grey and means the driver was slower. This can be an accident, a pit stop or a roll over situation.

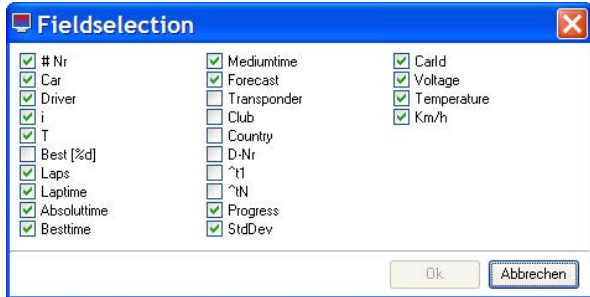

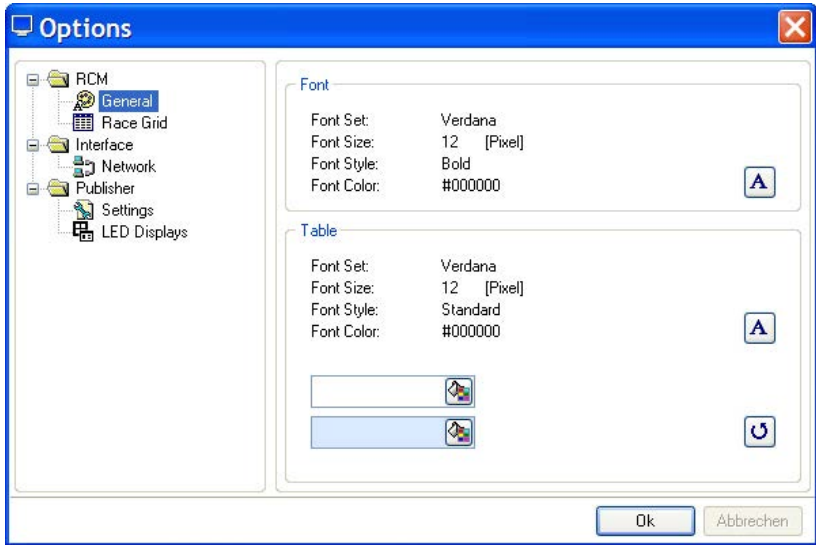

Race finished (default light blue): When the race time is over and the driver passes the last time the loop then the driver is marked light blue and has completed the race. Additional laps will not be counted anymore, even if the driver continues racing.

6.2 Options

The options allow you to change the settings for RCM Publisher. You access it through Configuration/Options

6.2.1 RCM/General

Marking in the left column General, you can set up the fonts, the fonts size and some colours used by RCM Publisher. You can set the Fonts for tables independent from the other text. The colours shown on the bottom of the column are used to make tables better readable. If you want to change these colours, please use light and different colours.

Besides other you can activate here:

Transponder: Transponder number used by the driver

Club: Membership of the driver to a club

Country: The country of the driver

P-Number: Pilotnumber of the driver as produced in the heat arrangement.

Delay to the first vehicle (^t1): Distance in laps and time to the leader.

Delay to the first vehicle (^tN): Distance in laps and time to the car in front of the driver.

You can define the table to your wishes. The order of the columns can be varied by drag&drop. Left click on the columns name, hold the mouse key pressed and drag the name to the desired place. Then leave the key.

Racetime				Current Racetime	
00:05:00				00:00:00	
Practice runs [Group 3 - Practice 2]					
# Nr	Car	Driver	i	Laps	Laptime
1	1	AAAAAA aaaaaa		→ 6	00:13.887
2	7	HHHHHH hhhhhh		→ 6	00:13.887
3	5	FFFFFF ffffff		→ 6	00:13.887
4	3	DDDDDD dddddd		→ 6	00:13.787
5	4	FFFFFF aaaaaa		→ 6	00:13.887

The width of columns in the table can easily be adjusted by clicking on the parting line in the header of the table. Hold the mouse key pressed and move the line to the position you need.

Racetime

00:05:00

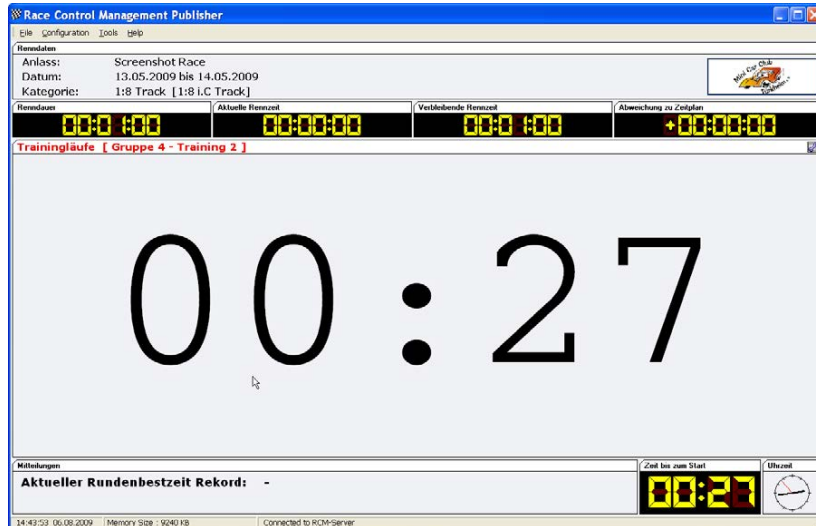

Current Racetime

00:00:00

Practice runs [Group 3 - Practice 2]

# Nr	Car	Driver	i	T	Laps	↕	Laptir
1	1	AAAAAA aaaaaa		➡	6		00:13
2	7	HHHHHH hhhhhh		➡	6		00:13
3	5	FFFFFF ffffff		➡	6		00:13
4	3	DDDDDD dddddd		➡	6		00:13

In Configuration/Option you can adjust the typeface, the size of the typeface and the colours to your wishes. We recommend to adjust the typeface for a good visibility on the monitor you are using.
Depending on the settings in Configuration/Settings a big clock with the countdown-time is shown instead of the driver-list when the countdown of a heat is running or the countdown-clock will be displayed larger. After the start of a race, the display is automatically switched to the normal display of the drivers/results. Further on you can hide the message panel.
